CLINICAL SUMMARY

Mr. Ramaiah Venkatesh, a 62-year-old male farmer from Nalgonda district, presented to the Emergency Department on 18-Oct-2024 with complaints of progressive breathlessness (Grade III), productive cough with yellow sputum, pedal oedema, and blood glucose of 380 mg/dL. He is a known diabetic and hypertensive for 8 years on irregular medication.

During hospitalisation, patient was started on IV antibiotics (Injection Ceftriaxone 1g BD x 5 days), subcutaneous insulin (Actrapid sliding scale), IV Furosemide for oedema, and antihypertensives were optimised. Blood glucose was brought under control (FBS 118 mg/dL at discharge). Chest X-ray on 25-Oct showed significant clearing of bilateral infiltrates. Pedal oedema reduced to trace levels. Patient is stable at discharge.
